

I'd like to show my whole-hearted support for John Pavlica, Jr.'s counterproposal for using CQUAM as an alternate night mode to IBOC. There are too many stations whose night service will be reduced to nil if IBOC is used even on only a few dozen high power stations. If a station such as KSTP (1500kHz, St. Paul, MN) were to use it, a lot of graveyard stations on 1490 could be hurt, plus some class D stations running low wattage on 1510. If WLS in Chicago were ever to run IBOC, the night signals of KTIS (900, St. Paul) and WMEQ (880 in Menominee, WI) would be rendered useless.

Sincerely,

Scott Todd
